

Anthony Ogbuah

(TR) +90 533 875 9405 | anthonyogbuah@gmail.com | European University of Lefke, Gemikonagi

Professional Summary:

Motivated and detail-oriented Computer Engineering student in my 3rd year, with a strong foundation in programming, digital and embedded systems, and IT support. Born in the Borough of Brent, North London, and raised in Lagos, Nigeria, I bring a unique international perspective and the ability to thrive in diverse environments and adapt to different people. Passionate about solving complex technical problems, I enjoy tackling challenges that require analytical thinking, creativity, and resilience.

I possess hands-on experience in software development, data analytics, and machine learning systems. Strong foundation in algorithms, digital systems, and full-stack web development. Experienced building data-driven platforms, real-time computer vision systems, and automation tools using Python, C/C++, and TypeScript.

Proven ability to deploy production-ready applications, analyze datasets, and develop scalable backend systems. Seeking Software Engineering, Data Engineering, or Data Analytics internship opportunities.

Technical Skills:

Programming Languages: C, C++, Python, SQL, TypeScript, JavaScript

Data Science & Machine Learning: Pandas, NumPy, Scikit-learn, PyTorch, TensorFlow, Keras, OpenCV, MATLAB

Data Engineering & Analytics: Data Cleaning, EDA, Data Visualization, Dashboard Development, Feature Engineering

Web & Backend: Node.js, React, Next.js, REST APIs, FastAPI

Cloud & DevOps: AWS, Docker, Kubernetes, Cloudflare

Systems & OS: Linux (Ubuntu), Windows, Socket Programming, System Design

Tools: Git, GitHub, Postman, Prisma ORM

Experience

IT & Digital Solutions Intern | 07/2025 - 09/2025 | RealtyPro Investment Global Limited | Lagos, Nigeria

Responsibilities:

- Improved online property listing visibility by optimizing SEO metadata and structured listing data, increasing digital inquiry conversion rate.
- Maintained and cleaned CRM and Excel customer datasets, improving follow-up response speed and data accuracy.
- Provided Tier-1 IT support including workstation setup, network troubleshooting, and system configuration.
- Built weekly reporting dashboards using Excel analytics and data visualization to track sales trends and customer engagement.
- Assisted website integration of online lead forms into internal email and CRM workflows, improving lead capture automation.
- **Collaboration:** Worked closely with sales agents to integrate technology into their client presentations (interactive maps, digital brochures).

Projects

1. Antlyst

Tech Stack: Next.js, React, TypeScript, Prisma, Plotly.js, Polars, Cloudflare R2, Clerk Auth

- Built full-stack SaaS platform allowing users to upload CSV datasets and generate automated dashboards and ML-based insights.
- Designed backend data ingestion pipeline supporting structured dataset uploads and transformation.
- Implemented interactive data visualization dashboards using Plotly.
- Integrated authentication and cloud storage for multi-user data isolation and secure storage.
- Developed AI insight module for automated dataset anomaly detection and pattern discovery.

2. Real-time Vital Signs Monitoring System using Computer Vision and NN's trained on Embedded Raspberry PI

A hybrid non-contact and wearable system for real-time vital signs monitoring in clinical settings. This project uses computer vision and machine learning to monitor temperature, blood pressure (estimated), pupil dilation, heart rate, respiratory rate, and patient age. A band will be made with a Raspberry PI chip in the future where my custom Neural Network will be trained on this chip for also detecting continuous heart rate and respiration activity + much more.

- Developed a real-time **age estimation model** using **EfficientNet-B0** architecture, achieving **1-3 year accuracy** across all age groups
- Implemented **face detection and alignment** using **MediaPipe** for robust preprocessing of the **UTKFace dataset**
- Engineered custom **loss functions** (Huber Loss, age-group weighted) to improve prediction accuracy on edge cases
- Built a **vitals overlay system** displaying real-time metrics at **30fps** using OpenCV

Tech Stack: Python, PyTorch, EfficientNet, MediaPipe, OpenCV, UTKFace Dataset

Github link: github.com/anthonyy616/health-project

3. Internship Automation Bot

An **AI-powered autonomous agent** system that automates the internship application process across multiple regions. The bot discovers opportunities, submits applications, and sends personalized cold emails — all while I focus on preparing for interviews, other personal projects and school. ()

- **Multi-Region Support**
- **Fully Autonomous**
- **Smart Scraping** — Region-specific job boards + Google Jobs integration
- **Auto-Apply** — Playwright fills application forms with stealth mode
- **Cold Email Outreach** — Personalized emails sent after each application
- **Real-Time Dashboard** — Live activity logs via WebSocket
- **Persistent Storage**

Tech Stack: Python, SQL, Playwright (playwright-stealth), BeautifulSoup, CrewAI, LangChain, OpenAI GPT-4o, SMTP

Github Link: https://github.com/anthonyy616/internship_automation

4. Personal Portfolio Website – HTML, CSS, Js

Created a fully responsive portfolio website to showcase academic and personal projects. • Used CSS Grid and Flexbox for layout design, and incorporated modern web standards for performance and accessibility. • Embedded GitHub repositories and contact form integration to enhance interactivity and professionalism.

5. Customer Churn Prediction (Netflix Dataset) – Python, Pandas, Scikit-learn Developed an ML model to predict customer churn using Kaggle's Netflix dataset.

- Applied data preprocessing, feature selection, and exploratory data analysis (EDA).
- Implemented supervised learning algorithms (Logistic Regression, Decision Trees, Random Forests) with hyperparameter tuning
- Achieved ~89% accuracy in churn prediction, providing insights for customer retention strategies.
- Visualized results using Matplotlib & Seaborn.

Education

Computer Engineering | European University of Lefke | 06/2027 | Lefke, Northern Cyprus TR-10 Mersin

- Completed courses in **Data Structure and Algorithms, Object-Oriented Programming, Logic & Systems design, Micro-electronics Circuit Design and Analysis, Operating systems, and Computer programming** (in C and C++).
- High Honor's Student
- **3.53** (out of 4) **CGPA** (as of writing)
- Awarded 75% scholarship
- Became a lab assistant in my sophomore year

Skills

Communication & Inter-personal skills, Customer service, Teamwork and Collaboration, Decision-Making, Problem-Solving, Adaptability & Flexibility, Time Management & Organization, Leadership Skills

Certificates

Google IT Support Specialist Certificate, Oracle OCI AI Foundations Certificate
